

Speak with more intelligence.

In forty percent of the world's new mobile phones, ST microchips give voice to those speaking. Even those not speaking.

Whether it's teleconferencing, checking e-mail, or just chatting, STMicroelectronics is part of the conversation. Our microchips run an astonishing 4 out of 10 mobile phones delivered in the world today. And we're working with leading mobile phone makers to create new appliances that *everyone* will be talking about.

We put more intelligence into everything.

STMicroelectronics (formerly SGS-THOMSON) • www.st.com • A world leader in semiconductors for consumer products, automotive, telecommunications, computer peripherals, industrial automation and control systems • For opportunities: <http://jobs.st.com>
